

NESPRESSO VERTUO PLUS COFFEE MACHINE

Guest User Manual for Fulham Pier Hotel

The coffee-making process assumes the machine is already plugged in & powered on.

1. PREPARING THE MACHINE

Fill the Water Tank: Make sure the water tank in the back is filled with fresh drinking water. If not, please fill in no more than 90% and place it in its position behind the machine.

Press the Button: A Green light will start blinking, which means it's heating up (takes about 40 seconds). Wait until the light turns a steady Green to show it's ready.

Place Your Cup: Adjust the cup support height (it has four positions) and place your coffee cup on it. Ensure the cup is large enough for the coffee size you are making.

2. INSERT THE CAPSULE

Open the Head: Push the machine lever upwards to open the machine head as shown in the image below.

Insert Pod: Place the capsule into the opening with the dome shape facing down.

Close the Head: Push the lever downwards to close the machine head.

3. BREW THE COFFEE

Start Brewing: Press the large Coffee Button on the top of the machine.

The machine will automatically read the capsule and select the correct brewing time and cup length.

The green light will rotate quickly while it's brewing.

Stop Early (Optional): If you want to stop the coffee flow early, press the coffee button again.

Wait for Finish: The coffee is ready when the light becomes a steady Green again.

4. EJECT THE CAPSULE

Eject: Once the preparation is done, push the lever upwards to automatically eject the used capsule into the container.

Enjoy your fresh Nespresso coffee!
